Education

VIT Bhopal University,	Aug 2023 - Aug 2027
• Bachelor of Technology in Computer Science - CGPA: 8.85	
Army Public School, Jammu Cantt	May 2022 - May 2023
• CBSE XII - AISSCE - 92.6%	

Experience

Software Engineer (Contract), Yellow Tribe – Remote	Nov 2025 - Present
• System Scalability & Optimization: Architected a parallelized scraping engine using Playwright and Node.js designed for high-throughput data extraction. Optimized resource usage via Docker containerization on Railway, reducing manual workload by 15+ hours/week.	
• Resilient Data Pipeline: Orchestrated a fault-tolerant BullMQ job queue to decouple scraping logic, ensuring 100% data retention during network failures via automated exponential backoff strategies.	
• Workflow Automation: Engineered an n8n email bot to autonomously categorize and respond to client inquiries, cutting response latency by 90% and saving 80+ monthly man-hours.	
Freelance Software Developer, Remote	May 2022 - Present
• Backend Optimization (Oct 2025 - Nov 2025): Diagnosed and eliminated critical Prisma schema conflicts and constructed 4 Next.js CRUD admin modules, streamlining the operations workflow.	
• Payment Integration: Integrated a comprehensive Stripe payment ecosystem into a production Next.js application, ensuring strict PCI compliance and seamless user transactions.	
• Legacy Code Performance: Revitalized a legacy MERN-stack application by optimizing database queries and incorporating dynamic pricing logic, improving page load speeds by 30%.	
Tech Lead, Software Development Club	Dec 2024 - Dec 2025
• Hackathon Leadership: Spearheaded the "AI-ZEN" Hackathon (100+ attendees) and directed technical workshops, resulting in a 25% increase in club registrations and a stronger collaborative coding culture.	

Projects

Full-Stack Payments Platform (Paytm Clone) [vidDemo] [Github]	Apr 2025 - May 2025
• Structured a scalable Turborepo architecture to enable code sharing. Enforced ACID-compliant P2P transfers via Prisma transactions and deployed a webhook server for idempotent updates.	
• Data Integrity & Security: Formulated a custom unique-token verification protocol for every transaction, ensuring data consistency and preventing replay attacks.	
• Stack: Next.js, Express.js, PostgreSQL, Prisma, Turborepo, Docker.	
Do-Sakhi (Real-Time AI Avatar) [Github]	Feb 2025 - Mar 2025
• Devised a lightweight decibel-based lip-sync algorithm and structured a serverless Next.js API pipeline for OpenAI/ElevenLabs streaming, reducing end-to-end latency by 40%.	
• Stack: Next.js (Serverless Functions), OpenAI API, ElevenLabs API, Tailwind CSS.	
Pentara Blogs [Demo] [Github]	Jun 2024 - Sep 2024
• Launched a high-performance blogging platform achieving a 99/100 Google Lighthouse score by leveraging Cloudinary CDN for optimized asset delivery and enabling server-side rendering.	
• Stack: MongoDB, Express.js, Node.js, EJS.	

Technologies

Languages: Go (Golang), Python, TS/JS, SQL	Databases: PostgreSQL, MongoDB, Redis
Back-End: Node, Express, Go, BullMQ	Cloud/DevOps: AWS, Docker, Git, Linux
Concepts: LLD, SOLID, OS Fundamentals	Front-End: React, Next.js, Tailwind CSS

Achievements & Open Source

- Automated Testing (Palisadoes Foundation): Modernized a significant repository (1000+ forks) by migrating 9 unit tests from Jest to Vitest. Enhanced test coverage and execution speed, ensuring code reliability pre-check-in.
- Linux & Systems Engineering: Uses Linux as a primary OS. Configured a self-hosted Linux home server to run local network services, demonstrating practical knowledge of OS fundamentals and system administration.
- Workshop Instructor: Conducted a comprehensive "Git & GitHub Mastery" workshop for 80+ participants.
- Competitive Programming & Sports: Achieved 1st/4th place in college CP contests. Competed as an inter-zonal football player.
